

中華民國文件證明書防偽說明

Anticounterfeiting features of the Document Legalization Certificate

- ① 連續調線條粗細變化圖案：採用兩版雙色粗細線條變化，製作出具有濃淡效果粗細線底紋圖案。

Guilloche patterns with lines of varying thickness: guilloche patterns of different colors are interposed and use lines of varying thicknesses.

- ② 二色凹版印刷：利用有價證券凹版印刷機特殊結構功能，同時於一塊版紋上印刷多種不同顏色，多色印紋準確套印自然融合混色。

Multicolor intaglio printing: the advanced intaglio printing technique produces microimages with a single printing plate.

- ③ 顯性螢光油墨：在紫外光源照射下，藍色圖案會變成螢光圖案。

Overt fluorescent ink: under ultraviolet light, the blue picture turns fluorescent blue.

- ④ 變色油墨：輕轉角度由紅色變金色。

Optical variable ink: when the document legalization certificate is tilted, the color changes from red to gold.

- ⑤ 彩虹隔色底紋：底紋以雙色漸層融合，顯現彩虹般變化效果。

Overlapping rainbow patterns: rainbow patterns using two colors overlap in the background.

- ⑥ 隱性螢光油墨：在紫外光源照射下會顯現綠顏色螢光“外”圖案。

Covert fluorescent ink: the “外” appears in lime green fluorescent ink when under ultraviolet light.

- ⑦ 模鑄水印紙張：紙張迎向一般光源透視會呈現階調層次的圖案。

Multitone watermark: watermark with light and dark areas, shaded where they overlap.

- ⑧ 溶劑敏感變色反應：紙張加特殊化學材料，紙面經溶劑如汽油、酒精等塗抹時會有變色反應。

Sensitized paper: the chemical material in the paper will trigger color change when in contact with certain solvents such as gasoline or alcohol.

- ⑨ 螢光纖維絲：在紫外光源照射下會顯現不同顏色螢光纖維絲。

Fluorescent fibers: the paper fibers reflect different colors under ultraviolet light.
